

**Solution Definition for End to End IT Systems**

KEY DELIVERABLES:

- Project management expertise
- Business analysis, including workshops, requirements gathering and use cases
- Proposal of system work streams required
- Producing option selection reports
- Maintaining tactical solutions in parallel
- Decision on the phase of deliverables presented in an investment Paper
- Manage stakeholder expectations

WE WILL SHOW YOU  
THE WAY TO SUCCESS!

**KEY BUSINESS CHALLENGES:**

- Investigating legacy systems within Network Rail for suitability
- Overcoming security restrictions for contractors to access the systems
- Ascertaining data sources
- Multiple processes across multiple areas

**BUSINESS OVERVIEW:**

**£14 million** is spent everyday on **maintaining** and **improving** the British railway infrastructure. The company is a **not-for-profit** national infrastructure company that was formed to **manage** and **revitalise** Britain's railways. It is responsible for the **operation, maintenance** and **renewal** of Britain's rail infrastructure - the tracks, signals, bridges, viaducts, level crossings, tunnels and stations. The company employs **30,000 people** and has an annual turnover of **£3.8 billion**.

**THE SOLUTION:**

- Comprehensive documentation for each proposed system including requirements, use cases and options selection reports
- Regular weekly reporting on work date for both II and IM client teams
- Project reporting stating what has been delivered for the feasibility phase and what is required for the next phase
- Decisions on the next phase for each work stream
- Investment paper for the next phase of work
- Proposed project plans for next phases of work

*TUSP blend people, process and technology to deliver successful change solutions*
