Project – Project Delivery

Upgrade of the Great Northern Great Eastern line, that runs from Peterborough to Doncaster, the upgrade includes a reconrol of all the signalling from local signal boxes to the Lincoln Signalling Centre, works include extensive civils and track, together with the largest level crossing programme in the UK.

Key Business Challenges

The project was originally established as a number of separate projects, so forming an alliance was a positive move to ensure delivery and gain significant cost savings.

The Solution

tusp provided Project Management, Project Controls and Construction Management services to the GNGE Alliance, which included Network Rail, Invensys, Carillion and Babcock Rail. Highlights were to gain authority for increased scope and establishing the Project Controls process for East Coast Main Line as a whole.
