

## Project - Orbis

The Orbis programme is a £325m programme of Asset Information data and services capability enhancements, to improve Network Rail’s approaches to the acquisition, storage and usage of asset information .On this programme tusp deliver the strategy and development of major programme design, delivery and implementation for the ORBIS and Transformation Portfolio.

### Key Challenges

### The Solution

The sheer scale of the Orbis programme is a challenge as there is a need to satisfy 3 major priorities of capacity, reliability and cost alongside the growing passenger numbers. Also, the need is to continually collect, evaluate and collate data to process and communicate into a business change and bring added benefit where it is required.

Overall the programme has delivered 8,000 shock resistant phones issued to frontline staff, S&C verification app that directly updates the master asset register, ‘Where Am I’ app and the Track View pilot project to help planners visualise worksites.
